

## Pro Tools for Pros

Security professionals rely upon sophisticated, rugged and calibrated wireless threat detection tools to catch the bad guys and keep their clients safe. Yorkie-Pro™ is an advanced handheld wireless threat detection system.

- Cellular, Wi-Fi, BT/BLE
- Whitelisting friendly devices
- Direction Finding of P.E.D.s
- GPS & BLE tracker detection

## People are being TRACKED

New low-power BLE (Bluetooth Low Energy) trackers are being used to track and stalk the whereabouts of all kinds of important people. From famous athletes, to actors, to business people to politicians, any person of value to kid-nappers, blackmailers and terrorists is only a tag away from being tracked and stalked.

# SECURITY DRIVING

GPS trackers have been tracking vehicles for over 20 years. And as GPS receiver technology has improved, trackers got smaller and allowed real time tracking of fleets and vehicles all over the world.

But stalkers and criminals weren't satisfied with the short battery life and subscriptions that GPS trackers require so they have shifted to an easier, cheaper and more anonymous alternative - BLE trackers.

Drivers and teams entrusted with the security of highly valued individuals must have the freedom to drive anywhere without being tracked. And since BLE tags are so easy to hide anywhere inside or outside of a vehicle, they need an effective way to quickly sweep their vehicle hidden tags.

**CAN A DRIVER SAFELY TRANSPORT AN IMPORTANT PASSENGER IF THE VEHICLE IS BEING TRACKED?**

BlueSleuth-Lite™ features a basic mode and a pro mode so anyone can effectively detect and locate hidden tags in their vehicle and beyond.

# BODYGUARDING

Famous Sports Illustrated swimsuit model, Brooks Nader, was tracked one evening walking home from a local bar. She never even saw her stalker but he was certainly watching and following her thanks to the AirTag he slipped into her purse earlier that evening.

She arrived home, after being tracked for hours, when the AirTag finally chimed. She found the tag and saw a warning notification on her phone, but she was lucky this time. Everyone (famous or not) deserves privacy and also to immediately know when that privacy is being violated.

**HOW CAN A BODYGUARD EFFECTIVELY PROTECT AN ASSET IF THEY CAN BE SECRETLY TRACKED BY ANYONE?**

BlueSleuth-Lite™ detects any BLE tag and immediately notifies the user. Meanwhile, some stalking notifications can take days to register in iOS or Android devices.

# EXECUTIVE PROTECTION

You might have heard about @ElonJet, a popular account that tracked Elon Musk's private air travel. Musk claimed that this publicly obtainable information was a danger to him and his family so he shut down the account on X (formerly Twitter). Now imagine a tiny BLE tag placed on Elon's jet, in his briefcase or even in his pocket without his knowledge and you can understand an even larger threat.

BLE tags can track the whereabouts of powerful business people anywhere in the world - in real time. These tags are cheap, have long lasting batteries and some audio notifications can even be muted by removing the speakers.

**HOW DO YOU PROTECT INDIVIDUALS FROM ENEMIES AND KIDNAPPERS WHO KNOW HIS EVERY MOVE?**

BlueSleuth-Lite™ sweeps individuals, their bags and entire rooms in seconds. This crucial time savings can be used to bolster physical security with more security team members
